Expression $\longrightarrow$ Priya $\longrightarrow$ true

Female $\longrightarrow$ true $\rangle$ Priya is <u>female</u>.

* it is a behavioural design pattern used to define a grammar for a language and provide an interpreter to interpret sentences in that language. It is generally used to interpret expression in a specific content, such as parsing and evaluating logical expressions, formulas

– Abstract Expression : declares an interface for interpreting.

– Terminal Expression : implements interpretation for basic elements.

–Non - Terminal Expression : implements grammar rules and recursively calls interpret on sub- expressions.

– Content : contains information that's global to the interpreter.
